Editing Files Testing Files Sharing Files

A site, in Macromedia Dreamweaver, is a collection of files and folders that corresponds to a website on a server.

What would you like to name your site?

Example: mySite

What is the HTTP Address (URL) of your site?

Example: <http://www.myHost.com/mySite>

If you want to work directly on the server using FTP or RDS, you should [create an FTP or RDS server connection](#). Working directly on the server does not allow you to perform sitewide operations like link checking or site reports.

Local Info

Site name:

Local root folder: 

Refresh local file list automatically

Default images folder: 

Links relative to: Document Site root

HTTP address:

This address is used for site relative links,
and for the Link Checker to detect HTTP
links that refer to your own site

Case-sensitive links: Use case-sensitive link checking

Cache: Enable cache

The cache maintains file and asset
information in the site. This speeds up the
Asset panel, link management, and Site
Map features.
